Security Clearance: Active Secret

SUMMARY

Software engineer with 6 years of full-stack experience across both engineering and UX/UI design, equally invested in writing clean code and shaping user-centered design — a practice deepened through HCI graduate coursework at Drexel University.

PROFESSIONAL EXPERIENCE

L3HARRIS TECHNOLOGIES **Clifton, NJ**

Senior Associate Software Engineer & UX/UI Designer **2022-Present**

- Lead architecture, full-stack design, and implementation for 20+ features for a lower tactical network radio preset planning application using Java, SQL, Vue.js, React, Angular, and JavaScript
- Participate in all phases of the Agile SDLC — requirements, design, implementation, integration, and testing — for real-time control of advanced tactical radio equipment
- Work with UX/UI team leads to create and build 15+ user-centric mock-ups for radio preset planner applications, driving a 30% improvement in functionality and user experience
- Apply UX research methods — usability testing, personas, and Axure wireframes — to inform design decisions
- Continue to conduct 10+ user engagement sessions with U.S. Army veterans, gathering feedback on user preferences, pain points, and desired features
- Utilize functional programming techniques for clean, efficient code across a 50k-line codebase
- Travel to military bases to deliver hands-on customer support and troubleshoot application testing directly with users
- Successfully manage and deliver high-quality work across 3 concurrent projects in a fast-paced, dynamic environment

Associate Software Engineer **2020-2022**

- Implemented and sought out software optimization processes, refactoring and organizing 10k+ lines of code
- Participated in 50+ peer code reviews offering constructive feedback and guidance to colleagues
- Spearheaded the design and implementation of an automated application for applying government code headers, reducing the time for monthly code drops by 40% and saving the team 10+ hours of manual work each release cycle

PROJECTS

WAVEWISE — AI-POWERED BEACH SAFETY ASSISTANT **Personal Project**

- Inspired by a Human-Computer Interaction graduate course assignment at Drexel University; independently expanded it in personal time into a fully coded prototype using HTML, CSS, JavaScript, Leaflet.js, and the OpenAI API to deliver real-time, location-based beach conditions and safety information

ACCESSISCAN — AUTOMATED ACCESSIBILITY AUDITOR **Personal Project**

- Built a full-stack web app (Next.js, TypeScript, Playwright, axe-core) auditing any URL against WCAG 2.0/2.1 AA standards with a compliance score and categorized violations; containerized and deployed on Render

EDUCATION

DREXEL UNIVERSITY

Master of Science, Human-Computer Interaction **Philadelphia, PA**

Expected 2028

VILLANOVA UNIVERSITY **Villanova, PA**

Bachelor of Science, Major in Computer Science, Minor in Cognitive Science **2016-2020**

ADDITIONAL INFORMATION

- Programming Languages: Java, SQL, JavaScript, HTML/CSS, Vue.js, React, Angular, C/C++
- Frameworks: Springboot, Node.js, Electron
- Tools: Axure, Figma, Maven, Postman, JMSToolbox, GitHub, BitBucket, Jenkins, Jira
- AI-Assisted Development: Codex, Claude Code
